### DETAILED ACTION

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

### *Response to Amendment*

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-2, and 4-14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. (New Matter)
4. Applicants have amended the instant claims to recite "wherein said compound specifically hybridizes with nucleotides 1-128 or nucleotides 149-14121 as set forth in SEQ ID NO: 3 and inhibits the expression of a nucleic acid molecule encoding apolipoprotein B." As support for this amendment, Applicants referred to page 9, 90 and page 91. However, nowhere in the specification as filed is the range 1-128 or 149-14121 adequately supported. Applicants appeared to have merely amended the instant claims to read around the Tang et al. reference which discloses an antisense oligonucleotide of 20 nucleotides in length that is complementary to the first 20 nucleotides of the apoB open reading frame, and corresponds to the region left out of the claimed range of nucleotides 1-128 or 149-14121. The newly added claim limitations are

Art Unit: 1635

considered new matter since the specification as filed does not provide proper antecedent basis for these limitations.

Applicant is required to cancel the new matter in the reply to this Office Action.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

6. Claims 1, 6, 11-12, and 20-23 are rejected under 35 U.S.C. 102(a) as being anticipated by Chan et al. (cited on page 3 of IDS, reference AH: WO 01/12789 A2).

Chan et al. provide a ribozyme that contains flanking sequences that are complementary to nucleotide sequences flanking the GUA cleavage site at position 6679 of a nucleic acid encoding apolipoprotein B. This ribozyme, RB15, comprises 48 nucleotides in length, see page 2, lines 14-18. RB15 is complementary to the flanking sequences surrounding nucleotide position 6679 of the nucleic acid sequence according to GenBank Accession No. X04506, which corresponds to the published human apoB100 sequence, and is identical to SEQ ID NO: 3 of the instant application. Chan et al. also teach that once RB15 is synthesized, it can be modified to enhance its stability by incorporating 2'-O-methyl groups. According to Chan et al. ribozymes may be administered to cells by a variety of methods, including by encapsulation in liposomes, by iontophoresis or by incorporation into vehicles such as hydrogels, psyclodexdrins, or microspheres, and may be used either alone, or in conjunction with other agents, e.g. other drugs used to lower cholesterol levels (see page 5, lines 1-21).

Art Unit: 1635

Chan et al. teach each and every aspect of the instant invention thereby anticipating Applicant's claimed invention.

***Conclusion***

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
